TITLE: Photocells with longitudinal photoelectric effect¹⁵

SOURCE: Radiotekhnika i elektronika, v. 10, no. 1, 1965, 138-146

TOPIC TAGS: photocell, photoelectric effect

ABSTRACT: The equation for potential difference across an infinite p-n junction set up by G. Lucovsky (J. Appl. Phys., 1960, 31, 6, 1038) is adapted, in the present article, to the case of a finite-size photocell. Boundary conditions for solving the problem are formulated with an allowance for that part of the p-n junction which is located under the contact. For not very high light intensities, the solution is presented as a small-parameter series. At variance with Lucovsky's assumptions, the longitudinal photo-emf is supposed to be small as

Card 1/2

L 31011-65

ACCESSION NR: AP5002909

compared with $AkT/q = 30-50$ mv, where A is the parameter of the current-voltage p-n-junction characteristic, k is the Boltzmann constant, T is temperature, and q is the electron charge. An equivalent circuit of the photodiode is suggested, and conditions of independence between photo-voltages of both pairs of contacts are formulated. Experimental results are reported which were obtained with phosphorus-doped high-resistivity Si 5 x 6-mm and 10 x 12-mm cells illuminated by a 0.4-mm light spot. The reduced longitudinal sensitivity was 60-80 mv/mm-mw; reverse saturation current, 10^{-6} a/cm². The effect of the light spot position on the longitudinal photo-volt and photo-current is presented in 6 curves. Orig. art. has: 5 figures and 30 formulas.

TITLE: Effect of the back-contact quality on the operating characteristics of silicon photoconverters

SOURCE: Elektrotehnika, no. 12, 1965, 44-47

TOPIC TAGS: photoconverter, photocell

ABSTRACT: The results are reported of an experimental study of the effect of temperature (within -70 +80°C) on the short-circuit current, no-load voltage, resistance, and efficiency of p-Si devices. All parameters were calculated from light I-V characteristics. The characteristics were measured of photocollectors with two-types of back contact: (a) conventional, produced by chemical deposition of Ni and subsequent firing-on and (b) improved by boron-alloying of Si and then Ni plating and firing-on. With the improved back contact, the temperature coefficient of no-load voltage was 0.00236 v per 1°C; the efficiency was higher than that of conventional devices and linearly increased with decreasing temperature; the short-circuit current linearly decreased with temperature (2.01×10^{-5} amp/cm² per 1°C).

TITLE: Electric modulation of lateral photoemf

SOURCE: Radiotekhnika i elektronika, v. 11, no. 7, 1966, p.99-1294

TOPIC TAGS: photo emf, photoelectric effect, lateral photoelectric effect, photovoltaic

ABSTRACT: So far the lateral-photoeffect cells have been investigated under the conditions of a constant signal; G. Wallmark (Proc. IRE, 1957, 45, 4, 474) mentioned a possibility of obtaining an alternating lateral photovoltage. The present article describes a theoretical and experimental investigation of a lateral-photoeffect cell modulated electrically by superposing an external alternating voltage on the p-n-junction voltage; weak illumination is assumed ($\Delta kT/q = 30-50$ mv). It is found that: (1) The experiments have shown that the parameter $\lambda = I_n(\rho/W) / (\Delta kT/q)$ should not exceed 2.5-3 (for the photocells having $R = 20$ kohms and $A = 1.7$) in order to warrant the validity of the reported formulas; (2) The plot of light-spot coordinate vs. lateral modulated emf is linear, within 6%, when the spot moves away from the photocell center by a distance under 0.5 d; at 0.8 d, the nonlinearity is 12%; (3) The photocell sensitivity is proportional to the square of the photocell-

TITLE: Light-sensitive devices of silicon and gallium arsenide, based on barrier layer cells

SOURCE: Izmeritel'naya tekhnika, no. 12, 1966, 81-82

TOPIC TAGS: photovaricaps, photoelectric cell, silicon semiconductor, semiconductor device, gallium arsenide, arsenide, silicon compound, photosensitivity

ABSTRACT:

Semiconducting light-sensitive devices ("photovaricaps") based on barrier layer cells made of silicon and gallium arsenide single crystals and having low series resistance were developed and tested. The size of the photovaricaps ranged from 2 x 2 mm to 10 x 10 mm. The capacity for a unit of area for silicon photovaricaps without external voltage C(0) was approximately 0.027 to 0.030 $\mu\text{F}/\text{cm}^2$, and for gallium arsenide photovaricaps 0.38 to 0.050 $\mu\text{F}/\text{cm}^2$. The photovaricaps can operate in a range of sonic and ultrasonic frequencies. The most important parameter of the photovaricaps is the photosensitivity coefficient characterizing the relative change of capacitance per unit of luminous flux Φ . The capacitance temperature coefficient for

Card 1/2

UDC: 621.383

ACC NR: AP7002713

silicon photovaricaps in the photovoltaic mode was approximately 1.5×10^{-3} per degree, and for gallium arsenide photovaricaps 0.8×10^{-3} per degree. The photovaricaps were used for amplifying weak photocurrents and for indicating the displacement of weak light beams. Orig. art. has: 2 formulas and 2 figures.

"Boron concrete material" L. I. Tsvetkov.

TEXT: Concrete mixtures were developed on the basis of Portland cement 400, quartz sand and crushed granite, grain size 0-10 mm. The boron-concrete binding materials used were boron-containing glass or the boron melt with 10% borate ore of the in-situ deposit with 15% B₂O₃. These boron materials were added to the binder and to the coarse and the fine aggregates. When used as aggregate the borate ore was molten. The melt was either cooled in water with formation of slag sand as fine aggregate or used in the form of glass pieces which served as crushed material. Concrete mixtures with

1.5 - 2.85% B and a strength of 100 - 300 kg/cm² after 1-7 days were obtained. The weight by volume of the concrete was 1.4 - 1.5 kg/liter. Autoclave treatment of mortars and concretes considerably increased the strength in the first solidification period. After 4 to 7 days, the strength of con-

COVERAGE: The book presents a comprehensive review of problems connected with economics of the aircraft industry and with the organization and planning of aircraft production. Concrete problems of organization of work at aircraft enterprises are analyzed as they apply to various types of aircraft plants, e.g., aircraft construction plants, engine manufacturing plants, instrument-making plants. Specific features of the organization and planning of production in industrial and experimental plants are outlined. The Introduction and Ch. I, II, and XI were written by Professor N. A. Orlov; Ch. III by Docent S. V. Moiseyev, Cand. of Techn. Sciences; Ch. IV and XIX by Docent S. A. Sarkisyan, Cand. of Econ. Sciences; Ch. V and X by Docent D. E. Starik, Cand. of Techn. Sciences; Ch. TITLE: Criteria for complex evaluation of quality of manufactured products

SOURCE: Standarty i kachestvo, no. 8, 1966, 29-33

TOPIC TAGS: quality control, mathematic analysis

ABSTRACT: In planning a manufactured product and in evaluating its quality, various criteria are available, but many are in conflict with each other. For instance, low cost may preclude obtaining a high level of performance and durability. On one hand, for achievement of high quality, a prolonged and costly period of development often is needed; on the other hand, the product, once successfully manufactured, may be in mass production for a period of time and thus require a relatively low expenditure in the long run. Under the optimal level of production quality a compromise must be understood between quality and cost. The author suggests an expression for this compromise

$$K = \frac{Q_t}{B_s} \rightarrow \max, \quad (1)$$

where Q_t is the total efficiency of all products during their life and B_s is the sum

Card 1/2

ACC NR: AF6034909

of all expenditures of the state economy. Efficiency must be interpreted in each case individually. For instance, for tires, it is the mileage (under specified conditions of use); for means of transport, it is the amount of freight delivered, etc. By using Eq. (1), the author schematically establishes the relationship for K in which the numerator is the sum of the efficiency times the yearly output, the summation extended over all products and organizations using the products; and, the denominator is the total expenditure. Orig. art. has: 1 figure and 2 equations.

Belgrade, "Medicinski Glasnik", Vol 17, No 5-7, Jun-Jul 62; pp 231-237.

Abstract (German summary modified): Discussion of differential diagnosis and surgical respectively medical treatment of arterial thromboembolic diseases. In general the surgical method is preferable, as medical treatment often has to be followed by surgery anyway under less favorable circumstances than would have been the case if surgery had been done earlier. A number of brief case reports illustrate these contentions. Four arteriograms, oscillogram, 2 photographs of emboli; 21 Western and 5 Yugoslav references.

"Two cases of treatment of arterial hemorrhage due to a
hemangioma,"

NO. 1000, Journal Army Medical Research, Vol. 41, No. 4, July 1969,
pp 529-534.

Abstract: [Authors] discuss two cases of arterial hemorrhage due to
cases of arterial lesions, four of ... hemorrhage due to a... or another
and one of A. l. s. superior, the latter being a hemangioma. The
cases were reported two to 30 days after onset. One case ended in a fatal
situation was applied in two cases, transplacation in one, and ligation
in another. The ligation was successful in each case. The suggestion by the
authors is that urgent surgical intervention is in order in such cases
because of poor results from delayed operations and of the danger from
secondary bleeding, thrombosis, emboli, and infection of the hematoma.
Three photographic, four recent Western references.

"ABO Blood Groups and Stomach Tumors."

Belgrade, Narodno Zdravljje, Vol 19, No 6, 1963, pp 201-203.

Abstract: [Authors' Serbo-Croatian summary] A comparison of the frequency of various blood groups of the ABO system in 244 patients suffering from cancer of the stomach with a control group of 5624 other patients originating in the same area showed that there was a statistically significant increase in the number of patients with blood group A and a simultaneous decline in the number of patients with blood group O. A statistically significant difference was not evident in an examination of the differences in the proportions of all groups as a whole, suggesting a need for further comparisons with more material so as to obtain significant results under the most severe criteria.

TITLE : Natural regeneration of Alnus strobilifera and Lindneria latifolia.
PUBLISHER : N. S. Botanical, 1971, No. 2, 12
ABSTRACT : No data are given on the natural regeneration of A. strobilifera and L. latifolia in the Mekong River basin (Thailand) at 500 m above sea level. An abundance of young growth of trees is observed at the age of 16 years, indicating a well developed forest regeneration after 20 years of growth, which reaches an age of 16 years or more.

Text : A New Method of Determining Soil Water Tensions and Volume

Mag. Ser. : Prob. seric., 1966, 2, No. 11, 71-81

Note : The capillary constant for water at 20° is expressed according to Lauren, by the equation $H=14.32/r$, where H is the distance height to which the water rises in the capillaries and r is the radius of the capillary. If water in sand rises at 20° to a height of 500 mm, then $r=14.32/500=0.03$ m. Soil samples 5 cm in thickness were placed on the surface of a sand layer 500 mm thick. Water from c. 0.3 m sand pores passes only into the soil sample depth of 0.03 m.

samples were dried in the apparatus for half hours at 100°. They were then cooled and brought to a constant weight. The difference between the first and second weights equals the amount of water absorbed by the soil samples and corresponds to the volume of correspondingly sized pores. Examples of these determinations are given. This method is more accurate than the vacuum calorimetric one. It is more reliable and requires less time for the determination, while the cost of the device itself is

Bucharest, Revista de Zootechnie si Medicina Veterinara, Vol 16,
No 9, Sept. 1968, pp 19-24.

After giving a brief historical survey of pig breeding activities in Rumania, the author examines the measures being taken at this time to improve the quality of Rumanian pigs. The most important varieties of foreign pigs being added to Rumanian stocks are the Landrace and the White York pigs; their proper care and feeding is discussed and their valuable properties are emphasized. Other imported varieties of lesser importance are also briefly considered. Includes one Belgian reference.

"Feeding of Fazna Pigs Being Fattened with rations rich in Corn."

Revista, Revista de Zootehnica si Medicina Veterinara, Vol 13,
No 6, Jun 63, pp 2-16.

Abstract [Authors' English summary modified]: Fazna pigs were fattened from an initial weight of 50 kg to a weight of 110 kg in 90 days with a diet containing between 74.98 and 86.84 percent corn. Mean daily weight increases varied from 610 g for lot II to 681 g for lot IV, consumption of nutritive units from 4.927 per kg of live weight increase for lot II to 4.695 for lot IV. The slaughterhouse yield was not influenced by the different proportions of corn in the rations. Fattening of pigs with high-corn rations is recommended; best results were obtained by the authors with a combination of 86.84 percent corn, 7.01 percent wheat bran, 2.12 percent sunflower seeds and 4.03 percent blood flour. It is recommended to remove the pigs from the pens when they reach 105 kg. Contains 5 tables

4012. GLIGORE V., FLORESCU I. and PAPILIAN V.V. Rolul reumatismului in etiologia si patogenia sindromelor coronariene *The significance of rheumatic disease in the aetiology and pathogenesis of coronary syndromes* Probl. reumatol. 1956, 4 (115 -137)

It is asserted that angina pectoris, although it is rare in rheumatic patients, is only an anatomo-clinical localization of rheumatic disease. Cases are reported to show that angina pectoris and myocardial infarction have occurred in rheumatic patients. The clinical picture varied with the meteorological conditions - these affections had been preceded by acute tonsillitis, or occurred during or immediately after rheumatic polyarthritis, and improved or disappeared under the influence of antirheumatic treatment. These facts should be taken into account when considering the prophylaxis and aetiological treatment of angina pectoris and myocardial infarction.

In the summer of 1956, the incidence of haemorrhages in the course of ulcer disease as well as of cerebral and uterine vascular haemorrhages, was much higher than that noticed in the corresponding period of 1955. A study of the local climatic conditions during these months revealed sudden changes in atmospheric pressure and minimal temperature, mainly caused by the presence of certain currents of cold air. A causal relationship is established between the meteorological variations observed and the frequency of the haemorrhagic accidents.

3349. CLINICAL AND THERAPEUTIC CONSIDERATIONS ON ACUTE THYROIDITIS DURING AND AFTER INFECTION - Considerații clinice și terapeutice asupra tiroiditelor acute intrași postinfeccioase - Gligorov V., Crîțec Gh., and Weiss L. Clin. a II-a Med., Cluj - MED. INTERNĂ (București) 1957, 9/12 (1814-1821)

On the basis of 20 clinical cases, stress is laid on the frequency of acute thyroiditis occurring during or after acute infections of a seasonal, often epidemic nature: acute angina, rhinopharyngitis, influenza, rheumatism, pneumopathies, etc. The clinical forms are: acute rheumatoid thyroiditis provoked by an allergic infectious mechanism; acute microbial thyroiditis (due to pneumococci, staphylococci, streptococci, etc.). The clinical picture varies, according to the morphofunctional state of the gland and the individual reactivity; the functioning of the thyroid gland may be excessive or defective, the condition may be accompanied by fever, the rise in temperature being only slight occasionally, and there is often a diffuse or localized and painful tumefaction of the thyroid gland. So far as the diagnosis is

MED. INTERNA (Bucureşti) 1956, 10/6 (855-862) Grapha 3

ECG studies carried out in 50 patients submitted to tonsillectomy (for rheumatic, cardiovacular, renal and other diseases) revealed frequent disturbances explainable by a reflex nervous mechanism. Occasionally, notably in young subjects, myocardial coronary lesions were observed secondary to tonsillectomy. Removal of infection foci caused amelioration of the ECG picture in most cases.

4406. GASTROPATHIES AND DUODENOPATHIES AMONG LEADING SPORTSMEN - Considerații asupra gastropatelor și duodenopatelor la unii sportivi de performanță - Gligoră V., Ioanette M., Moraru M. and Pop V. Clin. Med. I. și II-a L.M. F., Cluj - MED. INTERNĂ (București) 1958, 10/7 (1045-1050)

Among a group of 43 athletes (skiers) two-thirds presented gastroduodenal affections (gastritis, duodenitis and, in 10%, ulcers). This high incidence is the result of many factors: the state of the CNS, circulatory imbalance, excessive demands made upon the digestive apparatus, exposure to cold, etc. However, the essential element in the pathogenesis of these morbid alterations is the dysequilibrium between the required blood flow and the actual blood flow in the digestive apparatus which results from effort during the digestion process. Nicolaeșco - Bucharest
